

Renewed hope for your wound

Whether you are suffering from a chronic wound or fearing a lengthy treatment due to diabetes or other comorbidities, Microllyte[®] Matrix offers you a new treatment option that could significantly improve the outcome of your wound.

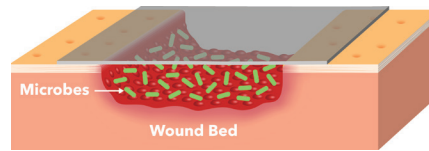

Microllyte[®] facilitates an optimal environment for wound healing

Microllyte[®]

Microllyte[®] contours to the wound bed, right where its matrix function is needed.

Conventional Wound Products

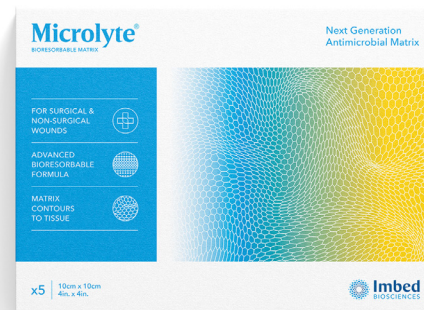

Other products don't contour, leaving space for bacteria to hide making healing more difficult.

Microllyte[®] Matrix contours to the wound, changing the terrain within the wound bed. An ultrathin matrix of bioresorbable polymer helps facilitate cell migration and proliferation. This can translate to faster healing of your wound.

Dekalb, IL

“

Being a diabetic, I was told my staph-infected wound could take months to heal. After only two weeks, my doctor and his staff were flabbergasted by the change! I am shocked and beyond grateful for Microllyte!

”

Angela Gibson
MD, PhD, FACS
Burn Surgeon and
Medical Director

Healing Services

“

The unique property of Microllyte is the total conformation to the wound bed as the thin film melts into all the crevices of a wound, likely where the bacteria are hiding and preventing healing.
